

#### 4.8 Zero Setback Considerations

While municipal service connections for developments on Blocks should conform to Standard Drawing C-102, it is recognized that this may not be possible or practical for developments with zero setback distances from the street line. In such circumstances, subject to approval of the City, the following may be applied:

- Building cleanouts on private property for storm and sanitary sewer connections are acceptable;  
and
- Valve boxes to be installed on the municipal boulevard adjacent to street line.
